Set in a fictionalized version of medieval Europe in which there is no monarchy, only a land governed by knights who are also married with no control or restriction. The central idea behind the game is to manage the kingdom's affairs, from building and maintaining its roads to organizing the various knights into parties to launch attacks or seek alliances. The focus of the game is on diplomacy rather than physical conflict; while making aggressive moves isn't prohibited, as such, most knights choose to follow a path of peaceful co-existence and avoid bloodshed at all costs. This might be, historically, a bad idea, as the game is set around 1470, at which point wars were still raging in Europe, most notably in the Tordesillas War which pitted Spain and Portugal against one another for dominance in the New World. However, as in most fantasy role-playing games, you get to the point in time where no such conflict is taking place in the game, and as such, the playable characters are not involved in any such conflicts. As a historical person, the game will emphasize some areas of medieval Europe more than others, and as such, while the game does make the locale believable, the characters are not historical figures with any historical significance. The original version of this game received some good, albeit extremely limited, reviews at the time of its release, but was not very popular with RPG fans for its simplistic and boring gameplay. After being re-released for consoles by Super Entertainment, this version received a much better reception for its new graphical style, but was unfortunately still plagued by other minor issues like NPC management and keyboard-only controls. When this version was re-released on Steam, a version with most of the PC issues resolved became available. The game is a "visual novel" with some RPG elements that require you to manage the player character's actions, and while there are a number of story choices, the game mostly revolves around a single romance. The game has a fairly high amount of content, though the player can set their preferences to skip some parts that may not interest them. A PC version of this game was released in 2017 by Gothic Alchemist with an English release planned. Registering on Gothic Alchemist takes only a few seconds and requires no download. What's new in Palais De Reine:

The Palais de Reine (;) was the name of various palaces of the House of Bourbon-Two Sicilies. The first and best known palace in Naples was built by Ferdinand II, his second wife Maria Cristina of Austria, and his son Ferdinand, its first occupant. Built between 1732-40 and completed in 1740, the Palais de Reine comprised three courtyards, 365 rooms, seven statues, 230 paintings, and 11 statues. The buildings were among the largest in Europe, and they became the first palace to be described as a "Versailles" or "Versailles on the sea". It was the residence of Ferdinand III in his youth, and was the nominal site of the royal court and government of the Bourbon-Two Sicilies in the 19th and 20th century. It was where the succession to the two thrones of the House of Bourbon-Two Sicilies passed, and where the birthplaces of all of Ferdinand II's and his daughter Marie Louise of Austria's children were located.

History Background Since acquiring dominion over the Kingdom of the Two Sicilies in 1720, King Charles III of Spain and his daughter Queen Maria Luisa of Savoy were continuously building palaces as the main residence of the Royal Family, located in the area called Anfiteatro Real ("Royal Stable"). This real-mansion, dating back to Charles III's first wife, Isabella Farnese, was located west of the San Carlo Opera theatre. Between Charles III and Queen Maria Luisa, more than 170 palaces/residences of the Royal Family were completed in Naples, and the town of Reggio Muraglieso became the favourite summer or winter residence of the Queen, because of the small climate and green landscape. The main residence of the King and Queen of Naples was the Antitesegi Palace in Antitesegi, and the summer residence of the court was the Villa della Quarquonia (now Villa San Giorgio) in Forio in Aguglia, reputed to be amongst the most sunny spots in the area. In 1804, already the father of Ferdinand II of the Two Sicilies, Ferdinand I also occupied Palazzo Reale a Cavallo ("Palace of the Horse"), located far to the north of Anfiteatro Real, and in 1848, the future Ferdinand II himself moved to this new Palazzo for the winter season, because the old residence was too large
