Irina Khubulaya, 36, and her girlfriend, Keren Goodrich, both 37, were shopping at the White Cloud Plaza strip mall in White Cloud, Oregon, where undercover officers observed the suspects engaging in sex acts. A police report states the incidents happened on July 12 and July 27. It's unclear if Goodrich has already been charged for her role in the prostitution of a 'vulnerable adult,' according to the report As the officer approached the women, he saw Khubulaya 'anally penetrating her vagina with something, possibly a dildo,' according to a police report obtained by The Daily Mail. Khuulaya also 'appeared to be putting something else into her vagina' as the cop arrested the pair. Images obtained by the Mail show both women with their hands on their crotches. Khuulaya, a veteran FBI agent, allegedly peddled sex for money at the strip mall in White Cloud, Oregon The 37-year-old and her girlfriend, Keren Goodrich, 39, were both arrested for sexually soliciting a 'vulnerable adult' The detained suspects - Khubulaya and Goodrich - appeared to be posting live streams on their Facebook pages During an investigation into the suspects, the Mail found footage on their Facebook pages appearing to show them performing sex acts on each other.

Bactericidal activity and mechanism of benzyl isothiocyanate against *Porphyromonas gingivalis*--a quorum sensing inhibitor. *Porphyromonas gingivalis* is a key pathogen in the development of chronic periodontitis. Benzyl isothiocyanate, a component of wasabi, was found to have bactericidal activity against *P. gingivalis*. The quorum sensing inhibitory activity of benzyl isothiocyanate was also investigated. The inhibition activity was determined by the auto-induction assay using the extracellular fractions of *P. gingivalis* (Ft). β -Galactosidase activity was decreased by the treatment with benzyl isothiocyanate in dose-dependent manner. The minimum inhibitory concentration (MIC) of benzyl isothiocyanate was 5.9 $\mu\text{g/ml}$, which was found to be lower than the MIC of 2.2 $\mu\text{g/ml}$ observed for cetyl trimethylammonium bromide (CTAB) used as positive control. The difference in the inhibitory activity between CTAB and benzyl isothiocyanate suggests the specific inhibition mechanism of benzyl isothiocyanate on *P. gingivalis*. To determine the chemical structure of benzyl isothiocyanate, mass spectrometry and infrared spectroscopy were used. From these analyses, benzyl isothiocyanate was identified as benzyl-1-cyano-2-phenylthio-propandione.

Who pays for social care? Almost 90% of people do not pay for social care themselves - not surprising perhaps considering that social care providers give advice about your finances to an average of two organisations every month. However, over the last five years, the number of people declaring earnings above £100,000 has gone up from 16,000 to 31,000, with 10,000 people earning over £150,000. Overall, people have been getting their social care for free from the state for decades. But the social care bill now stands at £23bn a year, four times the amount spent in 2010, according to the latest figures from the Department of Health. "People are now being asked to pay more and more for social care. The government
