"The Incredible Hulk" is a game based on Marvel comics, but it has nothing to do with them. The game is about three young people who find themselves inside a machine that can transport them to parallel universes. You play as one of the main characters, Gwen Stacy, who is the wife of one of the main characters, Kevin Costner. The player can play as Gwenn and Kevin, as well as their friends Bruce Banner and Wilson Fisk.

The biotechnological potential of laccases is widely recognized and novel applications are emerging. An increasing number of reports describe the biotransformation of organic dyes by laccases. Here, we report the hydrolysis of pharmaceutical excipients such as indomethacin, indocyanine green, and hydroquinone by a recombinant laccase from *Cryptococcus terreus*. For the latter, we identified a maximum of about 40% hydrolysis of the large precursor, phthalic anhydride. In the presence of hydrogen peroxide, this reaction was enhanced to 95%. Our data provide evidence for the biocatalytic degradation of indomethacin and hydroquinone, as well as an oxidative transformation of indocyanine green. In addition, we show that the degradation pathway of indocyanine green may be broader than previously described and may involve oxidation to indigo and/or indirubin. Visible light irradiation initiates desorption of acetylcholine and inhibition of histamine H(1) receptor in intact human skin. Irradiation with visible light under ambient conditions induces ultraviolet-like skin reactions. To examine whether endogenous light can cause histamine H(1) receptor (H(1)R) desensitization, we irradiated intact forearm skin with white light and observed desensitization of H(1)R for acetylcholine by using the local application technique with an H(1)R antagonist (brompheniramine). Exposure to white light attenuated the response to topical application of acetylcholine (0.02%) for 3 h. Exposure to white light did not alter the response to H(1)R agonists, 2-pyridylethylamine or 4-methylhistamine. We also observed the inhibition of the response to local application of histamine (4 microM) for 1 h after the light exposure. The inhibitions of acetylcholine and histamine responses by white light were significantly suppressed by dark-adaptation and by blockade of melanopsin ( c6a93da74d
